I enjoyed XM radio but felt that it was missing weather and traffic information that would really be helpful. Then this programming was added. I appreciate being able to get exactly what I want and only what I want without commercials at the touch of a button. I don't want to have to wait til the quarter hour or top of the hour to find out what is going on with the weather or traffic. It would be great if I could get this on the regular radio stations but I can't. I can not understand why Congress would want to inhibit this type of broadcasting.
